과제 목표 & 목적 확인

목표

- 영어를 사용하는 사람들을 대상으로 포스트를 작성하여 업로드할 수 있는 블로그를 제작한다.
 <목표한 바를 이루기 위한 기본 기능들 모두 구현 완료>

목적

- 한명이라도 더 많은 사람에게 나에 대해 알릴 수 있는 수단을 만들기 위함.

- 나의 현 프로젝트를 더 많은 사람들에게 알리기 위함.
- Java script, Node.js, Express.js와 같은 새로운 지식을 공부하기 위함.
 <목적으로 한 지식들의 '맛을 봄'. 이외에도 DB, Bootstrap도 건드려 보면서 새롭게 접한 지식이 많음. 그러나 기초가 부족.>

오픈 소스 참여

WhiteDog123 commented 12 hours ago

Hi. I have used your plugin, and I found one bug but I don't know where to inform you about this, so I will write here.

when I posted my video as 'Responsive' attribute, it works.

but when I press 'enter', Empty space that as large as posted video will be typed.

If I check it as HTML mode, I could find the code looks like below.

```
"content": "
```

```
</p><div class="embed-responsive embed-responsive-16by9" style="float: none;"><iframe width="640" height="360" class="embed-responsive note-video-clip" src="//www.youtube.com/embed/fxl6uckaFic?&loop=0" frameborder="0"></iframe></div><div class="embed-responsive embed-responsive-16by9" style="float: none;"></div><div class="embed-responsive embed-responsive-16by9" style="float: none;"></div></p>"
```

in here, you can see theres some empty video frame, that is same count of that I pressed enter. this took me some times to why is it happening, and I figured how to solve this.

```
if ($videoSize.val() == 0) {
```

```
    $videoHTML.addClass('embed-responsive embed-responsive-16by9');
```

```
//I just ignored this line right below.
```

```
//$videoHTML.css({'float': $videoAlignment.val()});
```

```
    var videoWidth = '640',
```

```
        videoHeight = '360';
```

```
    }
```

I just simply add the // at the apploximately line 353.

I don't have any basis on js so I cannot tell you guys why.

Anyway, here is an issue.

I used Microsoft Edge for this webpage.

If you have a look towards the top of the page, in the Issues tab, you'll see an button "New Issue".

I had a look at what you explained above, the behaviour happens in Chrome on Linux as well, but it's not the plugin it's the editor. As I'm part of the dev team for Summernote I'll bring this up as a bug with the other devs so we can look into it. Thanks for bringing the issue to attention.

DiemenDesign commented an hour ago Owner +

I've raised this issue with the other developers.

I think the behaviour should go like this.

When editing, or inserting new content after another area, for e.g. a paragraph of content. The editor should duplicate the preceding paragraph including styles and classes as it does for every preceding element as it does now, but only for paragraph (<p>) elements, but not for others. If there's a space or newline, then the text should just be entered without any surrounding element seeing as the editor has toolbar options to style selected text from the styles dropdown.

사용하고 있던 Post Editor에서 버그를 발견하여 코드를 수정해보고 Github통해 이슈 제기. 개발자가 이것을 발견하고 피드백.

오픈 소스 HTML 에디터인 Summernote를 적용.

해당 오픈소스의 버그를 발견해서 제보하여 개발자와 소통하기도 함.

개발하며 얻은 경험

- Github로 오픈소스 개발자와 직접 소통, 이슈 제기하고 내 요구를 반영하는 경험.
- Node.js, Express 사용. → 기초가 부족한 것을 깨달음, 다음 과제시에는 js 기초부터 잡는 것으로.
- 제안서 = 설계 대로 노선을 유지하며 점진적으로 개발
- DB 쿼리, 사용법. (정렬, 특정 조건으로 찾기 등등)
- 포스트보기에 Pagination 적용 / 포스트 몇 개 단위로 자르고 페이지 번호로 나누어 출력

추후 과제

- Front page의 slider bar 구현 or 이미 있는 슬라이더 바 오픈 소스 찾기&적용
- Admin / Visitor 페이지 나누기

- Post page에 Pagination 구현
